

I am researching the knowledge of the medieval master on how he set out roofs and buildings. I am looking to buy a large pair of antique iron dividers with legs 14 - 18 inches long with a locking screw. Do any of your members own a pair and would they be interested to sell?

Your help with my request would be much appreciated. I have a demonstration to do for the Carpenters Fellowship conference at the August Bank holiday weekend. It would be good to be able to use my own dividers.
